

CHART NOT
AVAILABLE

The chart displays a single data series as a dark grey line on a light blue grid. The line starts at the top left, drops sharply to a local minimum, then rises to a peak. It then falls to its lowest point, followed by a series of smaller peaks and troughs, ending with a slight downward trend. The grid consists of 10 vertical and 10 horizontal lines, creating a 9x9 grid of squares. The data points are approximately as follows:
